# SafeAll Driveline Pro

## Installation Guide

Thanks for choosing **SafeAll's Driveline Pro**. We've designed this toolkit to make it easier to remove or disconnect a commercial vehicle's driveshaft for towing or service. Installation instructions are shown on reverse. For more information, visit [SafeAllProducts.com](https://www.safeallproducts.com).

### Toolkit includes:

- A.** Ratcheting Hanger Bar
- B.** Spring Clip Ratcheting Rope Assembly
- C.** Hook-End Ratcheting Rope Assembly

# Installation instructions

1

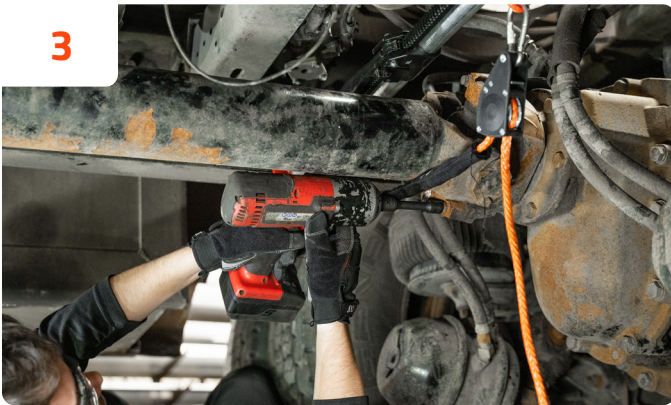

**Insert hanger bar.** Wedge the hanger bar between the truck's frame rails, making sure the padded C-brackets are tight against each lip. Close the handle so the spring loaded lock engages.

2

**Cradle the driveshaft.** Cradle the spring clip ratcheting rope assembly around the driveshaft. Ratchet the rope assembly tight to the drive shaft.

3

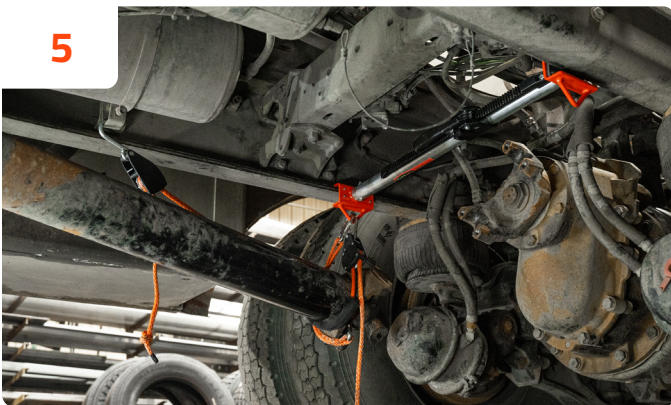

**Remove the driveshaft.** Remove the driveshaft, allowing the rope assembly to carry the weight.

4

**Adjust for travel.** Using the ratchet, raise or lower the driveshaft into proper position. If offset placement is necessary, tie both spring clips into the same steel loop and adjust the height.

5

**Lateral securement.** Utilizing the hook-end ratcheting rope assembly, secure the ratchet hook end on a crossmember or frame rail of the truck. Wrap the spliced hook end of the rope between the u-joint and driveshaft – then hook back to itself. Ratchet the rope tight.
