

Traffic Commander Product Overview

Help save lives by commanding safe behavior from the motoring public.

The 3-in-1 SafeAll Traffic Commander

Distracted driving is a danger tow operators face every day. Get more drivers to pay attention with this incredibly effective message board. The LED lights and block letters will help direct traffic away from your roadside work zone.

A message board.

An arrow stick.

A light bar.

Included in your purchase:

The SafeAll Traffic Commander includes the 3-in-1 message board, a paired operator tablet, a cab mount for the tablet and 20 feet of wiring for power, ground and switch applications. Mounting hardware not included.

Traffic Commander

Wi-Fi Tablet

Ram Mount

How it works in 4 steps:

Tow operators typically cannot depend on law enforcement to provide adequate traffic control at a recovery scene. Assume responsibility for your own safety with SafeAll's Traffic Commander. This truck-mounted message board can be deployed in seconds and effectively persuades drivers away from your work zone.

1 Log on

Connect to the Traffic Commander through the included tablet that is already paired to your unit or with any Wi-Fi-enabled mobile device. Your login will remain active for four hours.

2 Activate light bar

As you approach the recovery scene, flip the dedicated switch inside the cab of your tow truck to warn traffic you are impeding flow. The light bar function of the Traffic Commander will activate.

3 Deploy sign

Once safely on scene, select your desired message from the pre-loaded menu. The message board will automatically lift to the upright position and begin directing traffic.

4 Execute the call

Proceed with providing your service, knowing you've created a safe zone in which to work.

Traffic Commander Light Bar

The light bar features 16 LED ovals around the perimeter and 2 additional LEDs on the forward-facing side of the unit. Choose from numerous color combinations, including several which are state-specific and another which calls for no lights.
